

Böning Ship Automation celebrates its 45th anniversary with upcoming innovations

In 1977, when Germany was still divided into the German Democratic Republic (West) and Federal Republic of Germany (East), Günther Böning started his first business in the basement of his house, with the idea to build marine electronic devices to solve problems onboard. Microcontrollers were still in their early years and were not widely found on vessels.

If back then, Böning was a pioneer in machinery monitoring, today Böning is a reference for innovative and integrated systems - a unique company, that develops and manufactures automation equipment, 100% focused on vessels.

This year, Böning Ship Automation celebrates its 45th anniversary together with a fleet of over 15,000 vessels in the water with Böning equipment.

Böning facts:

20,000+
Engine Monitoring Displays

2,000+
Navigation Lights Panels

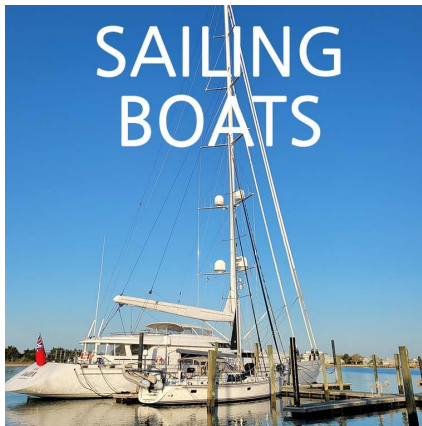

120+
Windfarm Vessels Monitoring Systems

50+
River Cruises Automation Systems
