ONE OF THE MOST INNOVATIVE TECHNOLOGY COMPANIES IN 2018.

Dear Customers,

We are glad to share with you our first Newsletter of 2019.

This is an important way of getting closer to our customers, communicate our latest releases and hear feedback.

In this edition, we want to share two positive experiences from last year: the first one, the reference in the Marine Electronics Journal about our integrated bridge solution on a 90ft motor yacht. The second one, an impressive system installed on a fishing vessel in Europe.

Innovation is in our DNA. We plan to continue to supply our customers with quality products and creative solutions.

We are looking forward to working again with you in 2019.

Böning USA Team

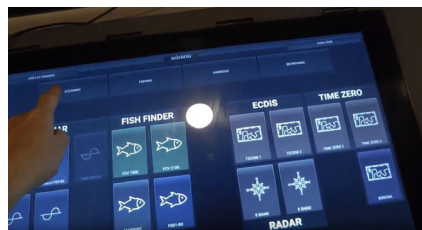

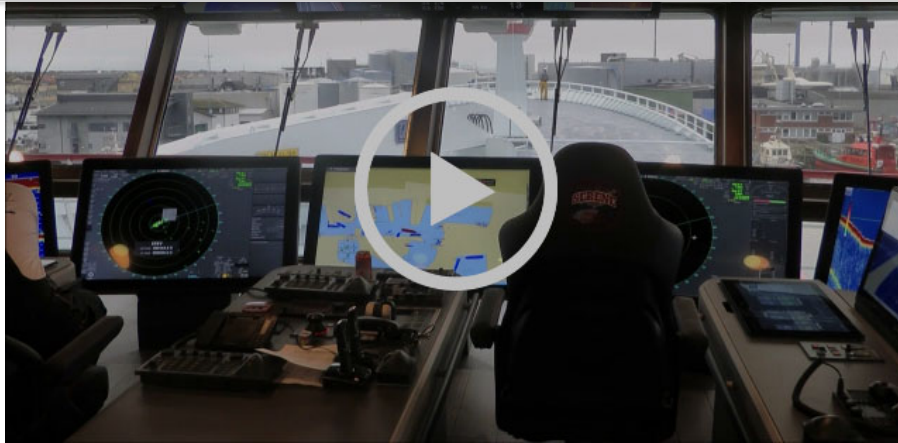

Ship Management System, which fully integrates navigation with ship management. The seamless operation of the vessel is the main feature of the Böning SmartBridge

The Bridge Automation

The Bridge Automation and seamless control are key functions for vessels that required efficiency and productivity. Check out an example where the Böning system was custom designed to achieve all these goals. Three 24in touch-screen Böning controllers have various presets, enabling the operator to quickly select preferred displays in relation to this boat prevailing mode of operation. This is an 82m fishing vessel, equipped with Böning Furuno Video Wall for Bridge Automation.
