

Newsletter November 2022 - Workboat Show Special

Dear Customers,

If you made plans to attend the 42nd edition of the **International Workboat Show 2022**, in New Orleans, make sure you don't miss Böning's vessel monitoring simulators.

The **Böning Monitoring, Alarm, and Control System (B:MACS)** represents the state of the art for decentralized alarm systems in ship data monitoring. The **B:MACS** monitors the state of ship alarms and status messages. All the connected systems and sensor data are graphically rendered, integrated into ship graphics and master plans, and individually visualized on color displays.

The use of modern communication media on the bridge allows the ship operator comfortable and well-organized access to all data relevant to the vessel's safety and operation. User-friendly touchscreen displays, powerful panel PCs, integration of mobile devices, and repeatedly redundant safety systems are features even owners of older vessels of all types do not have to

We will exhibit at booth 2536. We are looking forward to meeting you there.
