Modular Alarm, Monitoring and Control System

B CONNECT

INFINITY CLOUD SOLUTION

B 439

Map View

User Administration / Roles

Every user can be assigned a role and granted access to selected projects. The role defines the scope of options and rights.

User Alerts

For each value, user alerts can be configured individually. Apart from automated emails or voice mails, push notifications can be sent to Android Smartphones and tablets.

Automated Reports

Weekly or monthly reports are easily set up and distributed to selected user groups.

Two Factor Authentification

Via an external app (e.g. Microsoft Authenticator, Authy, Google Authenticator) you can increase the security of your account even further. With every login or critical system change the authenticator code is requested, securing your account in case your credentials should be stolen.

View your ship data wherever you are

- B: Connect connects you to your ship or fleet of ships wherever you are
- Monitoring data is transmitted to our cloud service in realtime
- View and analyze on your desktop PC or mobile device
- Analyze data history to increase fleet efficiency

Layouts

The user experience is equally smooth on desktop PCs and smartphones. The layouting concept is optimized for responsive design.

Import / Export Data

Importing and exporting data to and from Excel facilitates further data analysis.
